

CRITICAL SECURITY UPDATE

Action required for Issabel servers.

A critical vulnerability has been identified and is being actively exploited against Internet-facing Issabel servers.

The official security update is now available and must be installed immediately.

UPDATE IMMEDIATELY

Install all available official Issabel updates.

Even if your server shows no suspicious activity.

`cloud.issabel.org/security-update-2026-08.php`

POTENTIAL IMPACT

The update fixes the vulnerability being used in this attack campaign.

**01**

Remote control of the server.

**02**

Persistent malware installation (including rootkits).

**03**

Compromise of communications and stored information.

AFFECTED VERSIONS

ISSABEL 4

`issabel-framework 4.0.0-12 or earlier`

ISSABEL 5

`issabel-framework 5.0.0-3 or earlier`

HOW TO UPDATE

Run the command that matches your Issabel version.

ISSABEL 4

```
# yum --disablerepo=* --enablerepo=issabel-beta update  
issabel-framework
```

ISSABEL 5

```
# yum --disablerepo=* --enablerepo=issabel-cinco-beta  
update issabel-framework
```

AFTER UPDATING

HOW TO VERIFY

Check the installed package version:

```
# rpm -q issabel-framework
```

EXPECTED RESULT

ISSABEL 4 higher than 4.0.0-12

ISSABEL 5 higher than 5.0.0-3

If you still see the same or an earlier version, run the update again or consult the official advisory.

FREQUENTLY ASKED QUESTIONS

Should I update if I see no suspicious activity?

YES Exploitation is automated and may leave no visible traces.

Does the update clean up an already compromised server?

NO Isolate the server from the Internet and request a specialized security review.

Where do I download the update?

Only from the official Issabel repositories.

THANK YOU FOR HELPING KEEP THE ISSABEL COMMUNITY SECURE

Keeping servers up to date strengthens security across the whole community.

Always consult the official advisory for the latest instructions.
